1、概述 Introduction

因电池的容量、内阻和电压等参数值不能完全一致，这种差异导致充电时容量最小的电池容易过充，过放，受损后最小的电池容量变得更小，进入恶性循环。单体电池性能的优劣直接影响到整组电池的充放电特性及电池组容量降低。没有均衡功能的 BMS 只是一个数据采集器，很难称得上是管理系统。本产品的主动均衡功能，可以实现最大持续 1A 的均衡电流。将单体能量高的转移到单体能量低的电池，或用整组能量补充到单体最低电池，在实施的过程中通过储能环节把能量重新进行分配，最大程度的保证电池一致性、提高电池续航里程、延缓电池衰老。

Due to the battery capacity, internal resistance, voltage and other parameter values are not completely consistent, this difference causes the battery with the minimum capacity to be easily overcharged and discharged during charging, and the smallest battery capacity becomes smaller after damage, entering a vicious cycle. The performance of single cell directly affects the charge and discharge characteristics of the whole battery and the deduction of battery capacity. BMS lack of balance function is only a data collector, which is hardly a management system. The active equalization function can realize the maximum continuous 1A equalization current. Transfer the high-energy single cell to the low-energy cell, or use the whole group of energy to supplement the lowest single cell. During the implementation process, the energy is redistributed through the energy storage link, so as to ensure the battery consistency to the greatest extent, improve the battery mileage and extend the battery life.

11、操作说明 Wiring Instructions

11.1、焊接保护板 Welding

(1)焊接采样排线：从细黑线连接电池 B- (总负极)开始，第 2 根线连接第 1 串电池正极，后面依次连接每一串电池的正极；最后将 B+线也焊接在最后一串(总正极)上。(请参考说明书背面接线示意图)。

注:焊接采样线时不可插着保护板，请根据电池实际串数进行焊接，多出的采样线无需焊接(多出的采样线请做好绝缘处理)。

(2)检测电压：使用万能表或线序检测设备测量排线的针孔每串电压是否在正常范围内，如不正常请检查接线是否有错接、虚焊、假焊、漏焊等情况。

(3)焊接输出线：将 B-连接线(蓝色粗线)、P-连接线(黑色粗线)用螺丝锁至保护板对应 B-、P-螺母上，建议扭矩为 10N.m (牛米);并把 B-线焊接电池总负极。

注:焊接 B-线时请把 P-线做好绝缘处理，最后接输出端时再解除。

(4)接入保护板配件：如温控、电量板、GPS、显示屏等，再把采样线插入保护板自动激活。

(1)Welding sampling cable:Start with the thin black wire connecting battery B-(total negative electrode),the second wire connects the positive electrode of the first string of batteries,and then connects the positive electrode of each string of batteries in turn;finally,weld the B+wire on the last string (total positive pole). (Please refer to the wiring diagram on the back of the manual.

Note:Do not insert the BMS when welding the sampling cable.Please weld according to the actual number of battery strings.The extra sampling cable do not need to be welded.Please insulate them.

(2)Detection voltage:Use a multimeter or line sequence detection equipment to measure whether the voltage of each string of pinholes in the cable is within the normal range.If not,please check whether there are misconnections,false soldering,missing soldering,etc.in the wiring.

(3)Welding P-&B-cable:Screw the B-cable (blue one)and P-cable (black one)to the corresponding B- and P- nuts of the BMS;recommended torque 10N-m.And weld the B-cable to the total negative terminal of the battery.

Note:Please insulate the P-cable when welding the B-cable,and then remove it when connecting the output terminal.

(4)Connect the BMS accessories such as temperature control,power board,GPS,LCD display,etc.,and then insert the sampling cable into the BMS to activate automatically.

11.2、下载蓝牙 APP 或 PC 端上位机 Download and Install APP method

可通过如下 4 种方式下载 APP:

- 1) 扫描保护板上的二维码;
- 2) iOS 和谷歌应用商店搜索"Balance BMS";
- 3) 登录均衡宝官网(<https://www.100balancebms.com/download.asp>);
- 4) 联系客服获取;

下载并安装成功后, 打开蓝牙和手机位置信息,进入 APP 后会自动搜索蓝牙序列号, 核对保护板上的序列号无误后点击序列号进入电池管理界面。

- 1) Scan the QR code on the BMS.
- 2) Search APP"BalanceBMS" in the iOS store or Google store.
- 3) Download APP from official website(<https://www.100balancebms.com/download.asp>) .
- 4) Contact with customer service of store.

Open the Bluetooth and mobile phone location information and enter the APP, the APP will automatically search for the Bluetooth serial number, check the sequence number on the protection board and click the serial number to enter the battery management interface.

11.3、设置参数 Set parameters

首次使用时, 需在 APP 或电脑上位机设置电池类型及容量(出厂默认为铁锂参数), 电池组的容量是需要按电池组的实际容量进行设置。首次使用时需充满 100%作为标定, 其他保护参数可以根据自身需求进行设置, APP 修改参数的出厂默认密码为 123456,PC 上位机修改参数密码为 20211115。

注:在没有充放电的状态下, 保护板默认 3600 秒后休眠, 检测到充放电时会自动唤醒。也可通过 APP 或 PC 上位机修改休眠时间, 如设置 65535 则代表不休眠。

When using BMS for the first time,the battery type and capacity need to be set in the APP or PC (the factory default is LFP parameters).The capacity of the battery pack needs to be set according to the actual capacity of the battery pack.The battery needs to be filled to 100% for calibration at the frist time use.Other protection parameters can be set according to your own needs.The factory default password for modifying parameters on the APP is 123456,and the password for modifying parameters on the PC host is 20211115.

Note:When there is no charging or discharging,the BMS will sleep after 3600 seconds by default,and will wake

up automatically when charging and discharging are detected. The sleep time can also be modified through the APP or PC. If set to 65535, it means no sleep.

12、保修 Warranty

本公司生产的所有锂电池保护板，质保一年，人为因素导致的损坏除外。

All BMS produced by our company has a one-year warranty, except for damage caused by human factors.

13、特别说明 Special instructions

- (1)不同厂家的排线不通用，请确保使用我们公司配套排线；
 - (2)在测试、安装、接触和使用保护板时，要做好防静电措施；
 - (3)不要使保护板的散热面直接接触电芯，否则热量会传送到电芯，影响电池的安全；
 - (4)不可自行拆卸、更改保护板元器件；
 - (5)本公司保护板外壳仍会导电，组装作业中避免与电芯、镍带接触，因静电防护设计需要，外壳与主板共地，测量时有电压属正常现象；
 - (6)我司产品进行严格的出厂检验测试，但是因为客户使用的环境不同(特别是在高温、超低温、太阳下、潮湿环境等)，难免会出现保护板故障，所以客户在选择和使用保护板时，需要在友好的环境下使用，及选择一定冗余量的保护板进行备用。
- (1)Cables from different manufacturers are not universal, please make sure to use our company's sampling cables;
 - (2)When testing, installing, contacting and using the BMS, anti-static measures must be taken;
 - (3)Do not let the heat dissipation surface of the BMS directly contact the battery cell, otherwise the heat will be transmitted to the battery cell and affect the safety of the battery;
 - (4)Do not disassemble or change the components of the BMS by yourself;
 - (5)The enclosure of BMS will still conduct electricity. Pls avoid contact with the battery cell and nickel strip during assembly operations due to the need for electrostatic protection design. The enclosure and the motherboard share the same ground, and it is normal to appear voltage during measurement;
 - (6)All our products have undergone strict ex-factory inspection and testing to provide customers with the best quality products. Please make sure to use the BMS according to the parameter instructions, and avoid to use it in high temperature, ultra-low temperature environments (normal applicable temperature -40°C~85°C) to prevent the failure of BMS.
